## Report on impact of Blood testing of girl students

University organized a blood testing camp on 26/02/2020 for the girl students and staff of the university in which 146 girl students and 21 staff were tested for blood group and haemoglobin level. Among them, 23 students were found with a haemoglobin level below 10gm % and 34 students with a haemoglobin level of 10 -11 gm%. The girl students with a lower level of haemoglobin were provided with iron capsules daily after their diet for one month and hostel wardens were directed to provide a healthy and nutritious diet continuously consisting of green leafy vegetables, fruits, millets-based food products and milk to the students. Again, the blood testing camp was organized after 6 months and the haemoglobin level of all the girl students residing in the hostel improved significantly. All the students have a haemoglobin level above 10 gm% except 02 girl students. These two students including the girl students having a haemoglobin level between 10-11 gm% were again supplied with the iron capsule and directed to take one capsule daily for another 1 month as per the direction of the consultant physician.

After that blood testing camp was organized on 01/07/2021 and 02/08/2021, in this testing of haemoglobin level, No girl students were found with haemoglobin levels below 10gm% and only 10 students were found between 10-11gm%. Keeping in view the health of girl students on priority, the blood testing camp was again organized on 05/07/2022 in the university campus for monitoring the haemoglobin level of the students. In this blood testing camp, all the tested students were found with a haemoglobin level above 11gm%.
